

1. Word Frequency Counter

Read article.txt and display the frequency of each word (ignore case and punctuation). Print the top 5 most frequent words.

2. Filter Student Records

Given records.txt with entries like Name, Age, Grade, write a program to display names of students who scored above 80.

3. Palindrome Word Finder

Read words.txt and print all words that are palindromes (e.g., level, madam).

4. Line Categorizer

Read a file lines.txt and write lines containing numbers to numeric_lines.txt and the rest to text_lines.txt.

5. Update Marks File

Read marks.txt with Name, Marks, increase all marks by 5%, and save updated results to updated_marks.txt.

6. CSV Formatter

Read a file data.txt with comma-separated values, and print each field aligned as a table using loops and string formatting.

7. Sort by Length

Read words from dictionary.txt and write them to sorted_words.txt, sorted by word length in descending order.

8. Duplicate Line Remover

Read notes.txt, remove all duplicate lines, and write the unique lines to clean_notes.txt.

9. Count Word Lengths

Read a file essay.txt, and count how many words are of length 1, 2, 3... up to 10. Display the counts as a dictionary.

10. Capitalize Sentences

Read a paragraph from story.txt, capitalize the first letter of each sentence, and write the corrected paragraph to clean_story.txt.
