

****Simple Iterations and Number Manipulations****

1. Write a program to print the square of numbers from 1 to 10 using a while loop.
2. Create a program to display the first 10 multiples of 3 using a while loop.
3. Write a program to print all the numbers divisible by 5 within a given range using a while loop.
4. Display numbers from 50 to 0, decrementing by 5 using a while loop.
5. Write a program to calculate and print the factorial of a given number using a while loop.
6. Create a program to display the cube of numbers from 1 to 15 using a while loop.
7. Write a program to print all the prime numbers up to a given number using a while loop.
8. Create a program to count and display the number of even numbers in a given list using a while loop.

****String Manipulations****

9. Write a program to print each character of a string on a new line using a while loop.
10. Create a program to count the number of vowels in a given string using a while loop.
11. Write a program to count the number of uppercase letters in a string using a while loop.
12. Create a program to print the ASCII value of each character in a string using a while loop.
13. Write a program to display the reverse of a given string using a while loop.
14. Create a program to print only the digits present in a string using a while loop.
15. Write a program to print the index of each character in a string using a while loop.

****List Operations****

16. Write a program to count the number of positive numbers in a list using a while loop.
17. Create a program to display the minimum value in a list using a while loop.
18. Write a program to calculate the product of all numbers in a list using a while loop.
19. Create a program to display all the negative numbers in a list using a while loop.
20. Write a program to display all numbers greater than 50 in a list using a while loop.
21. Create a program to remove all duplicates from a list using a while loop.
22. Write a program to print the sum of only even numbers in a list using a while loop.

****Range and Series****

23. Write a program to display numbers from 1 to 100 that are divisible by both 2 and 3 using a while loop.
24. Create a program to print the Fibonacci sequence up to a given number using a while loop.
25. Write a program to display the first 10 terms of an arithmetic progression with a given first term and common difference using a while loop.
26. Create a program to display numbers from 1 to 50 but skip every 5th number using a while loop.
27. Write a program to print the squares of all odd numbers from 1 to 30 using a while loop.

****Custom Logic****

28. Write a program to print all the leap years between 2000 and 2100 using a while loop.
29. Create a program to calculate the sum of the digits of a given number using a while loop.
30. Write a program to display numbers from a list that are palindromes using a while loop.

****Miscellaneous****

31. Write a program to display the binary equivalent of numbers from 1 to 10 using a while loop.
32. Create a program to print the factorial of the first 5 natural numbers using a while loop.
33. Write a program to count the number of elements in a list greater than a given threshold using a while loop.
34. Create a program to check if a number from a list is divisible by 7 using a while loop.
35. Write a program to display the first 10 terms of a geometric progression with a given first term and ratio using a while loop.
36. Create a program to print the sum of numbers at even indexes in a list using a while loop.
37. Write a program to display all unique characters from a given string using a while loop.
38. Create a program to print all numbers up to a given number in reverse order using a while loop.
39. Write a program to print the cumulative sum of numbers from 1 to a given number using a while loop.
40. Create a program to print the first 10 square numbers starting from 1 using a while loop.
